

# Data Quality Scanner

Created to help data furnishers proactively self-identify and resolve discrepancies before they become problems.

## The trend of rising credit reporting complaints continues to increase year after year. Don't let faulty data make you vulnerable.

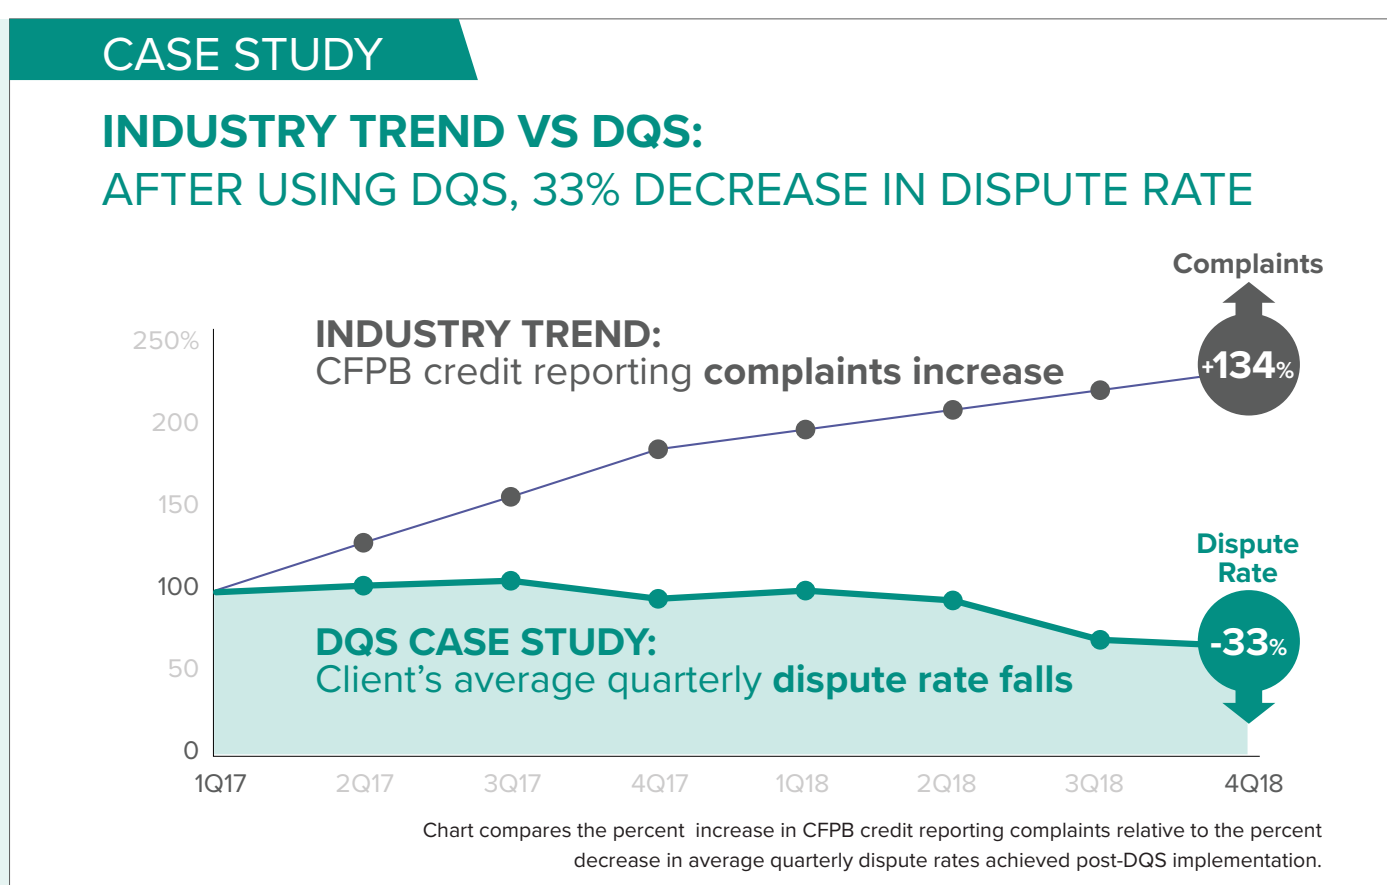

Credit reporting disputes and complaints continue to rise, with **credit reporting complaints more than doubling** in the past year alone and accounting for more than half of all complaints to the Consumer Financial Protection Bureau (CFPB).<sup>1</sup>

With the CFPB's renewed priority for ensuring the accuracy of credit reporting data, the **Bridgeforce Data Quality Scanner® (DQS) Solution** helps furnishers improve reporting accuracy in an automated, comprehensive, data-driven way.

## 4 KEY FEATURES OF DQS

- Proactively self-identify and resolve account-level discrepancies** before they become disputes, complaints, or regulatory risks
- Decrease your credit reporting dispute rates** by 10-35%.

- Go beyond what credit reporting agencies or internal solutions provide in their reports** to understand *all* potential discrepancies in your reporting files.
- Prioritize your limited resources in the most impactful ways** and detect new issues before they impact large numbers of customers—instead of reacting *after* the complaints and disputes arrive.

## DQS MODULES

**+ Metro 2®**  
340+ risk-ranked rules, inspecting single months and time-series behavior

**+ Early Warning Services (EWS)**  
240+ risk-ranked rules, inspecting single files and time-series behavior
