DATA QUALITY SCANNER

Ensure Consistent FCRA-Compliant Credit Reporting and Metro 2® Data Mapping

OVERVIEW

Mergers and conversions introduce significant risks: inaccurate and inconsistent Metro 2® data mapping and disputes handling can harm customers' credit scores, trigger costly disputes, and lead to substantial FCRA litigation and regulatory penalties.

> The Data Quality Scanner (DQS) helps organizations of all sizes by establishing baselines, preventing expensive data conversion issues, and ensuring parity with actionable improvement plans post-conversion.

FREE TRIAL PROGRAM FOR MERGERS

15–25% of trade lines and many dispute responses sent to credit bureaus contain errors without automated controls. To help, we offer a free Data Quality Scanner trial for mergers and acquisitions. This trial, which can be completed with no IT resources through BDS's partnership with Equifax, provides a summary report of FCRA data issues and actionable insights for improvement.

HOW DQS HELPS

Free Baselining of Accuracy

Find Errors Fast

Reduce Risks & Cost

Actionable Insights

FROM OUR CUSTOMERS

"We could not believe how easy it was to get started using the Data Quality Scanner. With other vendors, we're used to drawn out projects with many hurdles and unexpected challenges. That has not been the case here, thank you so much!"

Senior Executive, Top 20 Credit Union
